Opportunity for Investment										
Durian production was fluctuative during 2001-2005. The highest production was on 2003 as much as 741 thousand ton. But, production level decreased to 675 thousand tons in 2004. Overall, growth of durian production has been increasing equals 48.6%. This decrease not only happen to durian but also citrus, mangoes, and mangoesteen. It was probably caused by increasing price of insecticide.										
Export Import										
Further impact of decreasing production is volume import increase to 11 thousand tons equals 11.7 thousand US\$.										
Production-Center										
North Sumatera, West Java, and Mid Java are three highest province producer of durian in Indonesia for 2004. The average production is 1111. The quantity of production for each province per year are 111 thousand ton, 61 thousand ton and 45 thousand ton respectively. And harvest area for each province is 5.9 ha, 2.4 ha, and 2.7 ha respectively in 2004. West Java is the highest productive producer among all which its productivity is 25.7% Followed by North Sumatera as much as 19%
